UNDERGRADUATE

Operating Systems
Artificial Intelligence
Computer Graphics
DBMS
Data Structure and Algorithms
Unix Tools and Scripting

SKILLS

PROGRAMMING
Over 500 lines:
• Javascript • Shell • Java
• CSS • HTML
• ReactJS • Redux • NEXT.js
Over 1000 lines:
• C • C++ • Javascript

PROJECTS

PROMPTOPIA |NextJS Project
September 2023
• While building this project i learned a little bit of backend where i used MongoDB for database and most importantly i used NEXT.js to build this app which made developing really easy.
• I used NextAuth for authentication and for API i used NEXT.js awesome functionality by which i was able to create API endpoints without buying any server..
Checkout **Website** for build.

KASMEDIA |ReactJS API based Project
June 2023
• I made a Youtube clone using reactJS, it also has livestream feature to interact with viewers and the host can join as separate individual as well. It fetches actual youtube data from youtube API from rapidAPI.
Checkout **Website** for build.

XCRYPTO |ReactJS Project
April 2023
• This is crypto webapp which i made using reactJS. I used ChakraUI for UI elements and ChartJS for making crypto coin stats. This app fetches real time data from an API from coingecko.
Checkout **Website** for build.

REACT CART |ReactJS and Redux Project
May 2023
• This is a simple cart app, with dummy data. Basically while building this project I learned about Redux Toolkit. Redux is a state management tool which can be used to maintain states of variables which can be accessed globally by every component. I learned about store, reducers, action and payload.
